tre useful for Modified allergen with reduced IgE binding, WPI; 1999-479189/40. N-PSDB; AAZ06382. allergies.

Disclosure; Page 35-37; 46pp; English

This is the amino acid sequence of the Ara h 1 protein fror hypogea. The Ara h 1 protein has 23 IgE (Immunoglobulin E) epitopes, four of which are immunodominant (AAYIS247, AAYIS and AAYIS263). By modifying the IgE binding sites the abil allergen to provoke an immune response is downregulated. It has IgE binding sites can therefore be modified in genetic plants and animals to elicit less of an allergic response. OCT-2003 to standardise OS field)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention describes a novel method of desensitizing a patient to a polypeptide allergen and comprises administering to the patient a peptide derived from the allergen and restriction to a WHC Class II molecule possessed by the patient can be demonstrated for the peptide and the possessed by the patient can be demonstrated for the peptide and the postide is able to induce a late phase response in an individual who peptide is able to induce a late phase response in an individual who desenatising patients to allergens present in e.g. grass, tree and weed circle whiromidate (non-biting midges), spiders and mites, housefly, fruit if y, sheep blow fly, screw worm fly, grain weevil, silkworm, honeybee, non-biting midge larvae, bee moth larvae, mealworm, cockroach, larvae of renibition molitor beetle, manmals such as cat, dog, horse, cow, pig, renibit, rat, guinea pig, mice or gerbil. They can also be used to produce immunological vaccines which may be used to prevent and/or treat conditions involving hyperesnessitivity to allergens. This sequence represents a peanut (Arachis hypogea) allergen 1168391 Ara h I. (Updated on 17-OCT-2003 to standardise OS field)

The invention relates to a modified anaphylactic food allergen has an amino acid sequence that is substantially identical to that of natural camphylactic food allergen, accept for a cysteine residue that has been modified so that it cannot participate in the disulphide bond. The modified so that it cannot participate in the disulphide bond. The confine allergen, also comprise mutation of the IgE binding sites to reduce allergenicity. Also included are: (1) a method of making a confine specific mutation in the modified anaphylactic food allergen; (2) a uncleotide molecule encoding or for causing a site specific mutation in the modified anaphylactic food allergen; (4) a method of treating an individual by reducing the clinical response to a natural anaphylactic food allergen; (4) a method of treating an individual by anaphylactic food allergen the natural anaphylactic food allergen is useful for preventing or treating allergic reactions associated with any natural allergen such as food, insect, rubber or preferably anaphylactic allergens. It is also useful for treating wounds in mammals such as bovine, canine, feline, caprine, covine, porcine, mutine or equine species. The present sequence is a copy particular allergen (e.g. Ara hl, hl or hl)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         170 AGGIGCCICCAGAGTIGICAACAGGAACCGGAIGACTIGAAGCAAAAGGCAIGCGAGICI 229

```
The invention relates to a novel method for desensitising an individual to a selected polypeptide antigen. The method comprises administering a composition that contains polypeptide antigens in an amount that generates in the individual a state of hyporesponsiveness to the antigen to allow desensitisation to one or more polypeptide antigens. The method of the invention has immunomodulator activity, and may have a use in gene therapy. The composition and method are useful in manufacturing a medicament for desensitising an individual to a selected polypeptide antigen or for generating in the individual a state of hyporesponsiveness to the antigen to allow desensitisation to one or more polypeptide antigens. The present sequence is used in the exemplification of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 · 유
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The sequence represents the amino acid sequence of anaphylactic antigen and 1. Ara h 1 is an anaphylactic antigen (A), which was used to design antigenic peptides having a reduced ability to bind immunoglobulin E (19E) as compared with the intact (A), or having a sequence substantially identical to a portion of sequence of an antigen that includes at least one 1gE binding site of the peptide is aleared. The antigenic peptides are used in a composition which is useful for reducing risk or severity of allergic reaction to an antigen. This is done by identifying an individual at risk of allergic reaction to an antigen by identifying prior display of allergic symptoms when exposed to the antigen, or a familial relationship with an individual who proviously displayed allergic symptoms when exposed to the antigen. The subsophils in the individual's serum is identified. The individual is then contacted with a peptide corresponding to a portion of the antigen, which is selected, formulated, and delivered so that binding of the peptide to antigen. Proceedings and useful for treating and compared with IgE binding and comments.

The invention relates to a modified anaphylactic food allergen has an amino acid sequence that is substantially identical to that of natural anaphylactic food allergen, except for a cysteine residue that has been modified so that it cannot participate in the disulphide bond. The modification may also comprise mutation of the IgB binding sites to condition and so comprise mutation of the IgB binding sites to reduce allergenicity. Also included are: (1) a method of making a condition as site specific mutation in the modified anaphylactic food allergen; (3) a transgenic plant or animal expressing the modified on anaphylactic food allergen; (4) a method of treating an individual by reducing the clinical response to a natural anaphylactic food allergen; and an isolated fragment of peanut allergen Ara h 1. The modified anaphylactic food allergen is useful for preventing or treating allergen; creating associated with any natural allergen such as food, insect, reacting wounds in mammals such as bovine, canine, feline, captine, contine, murine or equine species. The present sequence is a food allergen, mutated to alter its IgB binding characteristics. Note: The present sequence is not shown in the specification but was created by the indexer using information provided in the specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               TCTGCAACGCATGCCAACTCATCACCTTACCAGAAGAAAAACAGAGAACCCCTGCGCCCAG 169

New modified anaphylactic food allergen, useful for preventing or treating allergic reactions associated with e.g. anaphylactic allergens.

Example 5; Page; 300pp; English.

The invention relates to a modified anaphylactic food allergen has an amon acid sequence that is substantially identical to that of natural anaphylactic food allergen, except for a cysteine residue that has been condified so that it cannot participate in the disulphide bond. The modification may also comprise mutation of the IgE binding sites to reduce allergenicity. Also included are: (1) a method of making a condified anaphylactic food allergen; (2) a nucleotide molecule encoding or for causing a site specific mutation in the modified anaphylactic food allergen; (3) a transgenic plant or animal expressing the modified anaphylactic food allergen; (4) a method of treating an individual by reducing the clinical response to a natural anaphylactic food allergen; can an isolated fragment of peanut allergen Ara h 1. The modified anaphylactic food allergen; and an isolated fragment is useful for preventing or treating allergen; creating whith any natural allergen such as food, insect, creating wounds in mammals such as bovine, canine, feline, caprine, creating wounds in mammals such as bovine, canine, feline, caprine, covine, porcine, mutine or equine special response. It is also useful for treating wounds in mammals such as bovine, canine, feline, caprine, allergen, mutated to alter its IgE binding characteristics. Note: The present sequence is not shown in the specification but was created by the indexer using information provided in the specification

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a modified anaphylactic food allergen has an amino acid sequence that is substantially identical to that of natural anaphylactic food allergen, except for a cysteine residue that has been modified so that it cannot participate in the disulphide bond. The modification may also comprise mutation of the IgE binding sites to reduce allergenicity. Also included are: (1) a method of making a modified anaphylactic food allergen; (2) a nucleotide molecule encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New modified anaphylactic food allergen, useful for preventing or treating allergic reactions associated with e.g. anaphylactic allergens

allergen; (3) a transgenic plant or animal expressing the modified anaphylactic food allergen; (4) a method of treating an individual by reducing the clinical response to a natural anaphylactic food allergen; (4) and an isolated fragment of peanut allergen Ara h 1. The modified anaphylactic food allergen is useful for preventing or treating allergen; reactions associated with any natural allergen such as food, insect, rubber or preferably anaphylactic allergens. It is also useful for treating wounds in mammals such as bovine, canine, feline, caprine, ovine, porcine, murine or equine species. The present sequence is a food allergen, mutated to alter its IgE binding characteristics. Note: The present sequence is not shown in the specification but was created by the indexer using information provided in the specification

The invention relates to a modified anaphylactic food allergen has an amino acid sequence that is substantially identical to that of natural canaphylactic food allergen, except for a cysteine residue that has been condification may also comprise mutation of the IgE binding sites to modification may also comprise mutation of the IgE binding sites to reduce allergenicity. Also included are: (1) a method of making a comprise pecific mutation in the modified anaphylactic food allergen; (2) a nucleotide molecule encoding or for causing a site specific mutation in the modified anaphylactic food allergen; (4) a method of treating an individual by calergen; (5) a transgent of plant or animal expressing the modified anaphylactic food allergen; (4) a method of treating an individual by creducing the clinical response to a natural anaphylactic food allergen; creducing the clinical response to a natural anaphylactic food allergen; creducing sascoiated with any natural allergen Ara h. The modified anaphylactic food allergen is useful for preventing or treating allergen; creating wounds in mammals such as bovine, canine, feline, caparine, creating wounds in mammals such as bovine, canine, feline, caparine, covine, porcine, mutine or equine species. The present sequence is not shown in the specification but was created by the indexer using information provided in the specification

The invention relates to a modified anaphylactic food allergen has an amino acid sequence that is substantially identical to that of natural anaphylactic food allergen, except for a cysteine residue that has been modified so that it cannot participate in the disulphide bond. The modification may also comprise mutation of the IgB binding sites to reduce allergenicity. Also included are: (1) a method of making a modified anaphylactic food allergen; (2) a nucleotide molecule encoding or for causing a site specific mutation in the modified anaphylactic food allergen; (2) a method of treating an individual by reducing the clinical response to a natural anaphylactic food allergen; (4) a method of treating an individual by reducing the clinical response to a natural anaphylactic food allergen is useful for preventing or treating allergic reactions associated with any natural allergen such as food, insect, cubber or preferably anaphylactic allergens. It is also useful for treating wounds in mammals such as bovine, canine, feline, captine, ovine, porcine, mutine or equine species. The present sequence is a food present sequence is not alter its IgB binding characteristics. Note: The present sequence is not shown in the specification but was created by the indexer using information provided in the specification
                                                                                                                                                                                                                                                                                                        GA, Burks WA, Cockrell G;

The invention relates to a novel antigen presentation enhancing hybrid polypeptide. The novel polypeptide has an N-terminal element consisting of 4-16 residues of a mammalian II-Key peptide and its non-N-terminal of 4-16 residues of a mammalian II-Key peptide and its non-N-terminal deletion modifications, a chemical structure covalently linking the N-terminal element to an MHC class II-presented epitope of a C-terminal element. The C-terminal element comprises an antigenic peptide binding site of an MHC class II molecule. Dinds to an antigenic peptide binding site of an MHC class II molecule. The antigen presentation enhancing hybrid polypeptide has the following activities antibacterial, virucide, fungicide, antirheumatic, antiarbhritic, neuroprotective, dermatological, immunosuppressive, antiarbhritic, neuroprotective, dermatological, immunosuppressive, enhancing hybrid polypeptide is useful for modulating the immune response in an individual and for treating infections (such as bacteria, virus, parasite and fungus), rheumatoid arthritis, multiple sclerosis, lupus crythematosus, diabetee mellitus, myasthenia gravis, autoimmune thyroiditis, scleroderma, dermatomyositis and pemphigus. This sequence thyroiditis, scleroderma, dermatomyositis and pemphigus. This sequence chromatomic personal processing processing
Novel Ii-Key/antigen presentation enhancing hybrid polypeptide, useful for treating infections, rheumatoid arthritis, multiple sclerosis, lupus erythematosus and diabetes mellitus.

The invention relates to a modified anaphylactic food allergen has an amino acid sequence that is substantially identical to that of natural anaphylactic food allergen, except for a cysteine residue that has been modified so that it cannot participate in the disulphide bond. The modification may also comprise mutation of the IgB binding sites to reduce allergenicity. Also included are: (1) a method of making a conficient anaphylactic food allergen; (2) a nucleotide molecule encoding or reducing a specific mutation in the modified anaphylactic food allergen; (4) a method of treating an individual by anaphylactic food allergen; (5) a transgenic plant or animal expressing the modified anaphylactic food allergen; (6) a matural anaphylactic food allergen; creducing the clinical response to a natural anaphylactic food allergen; and an isolated fragment of pearur allergen Ara h 1. The modified anaphylactic food allergen is useful for preventing or treating allergic reactions associated with any natural allergen such as food, insect,

The invention relates to a modified anaphylactic food allergen has an amino acid sequence that is substantially identical to that of natural anaphylactic food allergen, except for a cysteine residue that has been modified so that it cannot participate in the disulphide bond. The modified so that it cannot participate in the disulphide bond. The cadic allergenicity Also included are: (1) a method of making a reduce allergenicity Also included are: (2) a nucleotide modified encoding or for causing a site specific mutation in the modified anaphylactic food allergen; (3) a transgenic plant or animal expressing the modified anaphylactic food allergen; (4) a method of treating an individual by reducing the clinical response to a natural anaphylactic food allergen; and an isolated fragment of peanut allergen Ara h 1. The modified anaphylactic food allergen is useful for preventing or treating allergen; cand an isolated with any natural allergen such as food, insect, rubber or preferably anaphylactic allergens. It is also useful for treating wounds in mammals such as bovine, canine, feline, caprine, ovine, porcine, mutine or equine species. The present sequence is a food allergen, mutated to alter its IgE binding characteristics. Note: The present sequence is not shown in the specification but was created by the indexer using information provided in the specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Caplan M, Sosin H, Sampson H, Bannon GA, Burks WA, Cockrell G;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This polypeptide comprises major peanut allergen Ara hI (AAM22149). Its sequence was deduced from cDNA clone P41b (AAT76613), isolated from peanut seed cDNA using a primer (see AAT76616) based on an isolated Ara hI peptide (see AAW2405). The sequence shows significant homology with the vicilin family of seed storage proteins of other legumes. The allergen is recognised by serum IgE from a large proportion of individuals with peanut hypersensitivity. Ara hI and Ara hII deed a specific two-site MAb ELISA for the detection of Ara hI or Ara hII claimed). IgE- binding Ara hI antigen epicopes (see AAW24165-87) may be used in vaccines to protect against allergic reactions to peanut allergens, e.g. anaphylactic shock. The invention relates to a modified anaphylactic food allergen whose amino acid sequence is substantially identical to that of a natural anaphylactic food allergen in a disulphide analylactic food allergen. The natural anaphylactic food allergen is in its native conformation, except that the cysteine residue has been modified so that it cannot participate in the disulphide bond. Also included are a method of making a modified anaphylactic food allergen, a nucleotide molecule conformation in the disulphide bond. Also included are a method of making a modified anaphylactic food allergen, a transgenic plant or encoding a modified anaphylactic food allergen, a transgenic plant or animal expressing a modified anaphylactic food allergen, a transgenic plant or animal expressing a modified anaphylactic food allergen, a transgenic plant or anaphylactic food allergen by administering a modified above, a nettood of treating an individual by reducing the clinical response to a natural anaphylactic food allergen by administering a modified above, a naphylactic food allergen by administering a modified or anaphylactic food allergen by administering a modified or Ara h., comprising at least 10 consecutive amino acids of Apg37464 or ApG27465. About 10-17% of the amino acids when the natural anaphylactic food allergen recognised when the natural anaphylactic food allergen is contacted with serum 198 from individual (s) allergic to the natural anaphylactic food allergen. The tinvention clonks, Soybean dlycinin AzBla and Igg-binding epicopes of the English convalunt allergens Ara hl, Ara h2, Ara h3 (and their encoding convalur allergen by administric food allergen is contacted with serum and individual (s) allergen by administric food allergen or all the modified anaphylactic food allergen can be modified anaphylactic food allergen or all the modified anaphylactic food allergen or allergen or all the modified anaphylactic food allergen can be modified anaphylactic food allergen can be modified anaphylactic food allergen can be ma

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 17,
